FROM: Sallie Anne Springer
SUBJECT: Macon County LF's #2-#3-#4 Information only Response requested

There is a single, comprehensive groundwater monitoring program for these three sites. It is the intention that all wells be sampled quarterly for one year for the "list A" of parameters, then all wells (except G107 and G109) quarterly thereafter. When an operating permit is issued for the #3 site, require sampling & analysis of wells G107 and G109 for the "usual 8" or other parameters as chosen. Then, all wells will be monitored until the end of the post-closure period of the #3 site. Due to the small size of the #4 site, ^{at this time} no additional wells will be required in that area.

Wells:

G105 - in till

G106 - may be upgradient in alluvium

G107 - till

G109 - alluvial

G110 - alluvial

G111 - alluvial

G112 - upgradient shallow in till

G113 - till
